Interpreting ligation results

- Did the positive control work for many groups?
- No ligase results?
- Bkb + ligase tells you?
- What variations may be giving differences seen for experimental samples?

(Bkb^+ : insert)

{ incubation time, salt in ligation
recovery NOT equal } { tell } { Not on KR }

From cells on a plate to a tube of DNA....

GENEWIZ DNA Preparation Report #10-206466626

Date: 9/26/2012 Customer: Natalie Kuldell
Reported by: Caraline Egan Institution: MIT

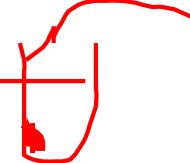

All prepped samples are in TE buffer (10mM Tris-HCl, 1mM EDTA, pH 8.0)

Sample Name	Prep Size	Endo Free	Copy Number	Yield (µg)	Conc. (ng/µl)	Vol. (µl)	OD 260/280	OD 260/230	Anti-biotics	Sequencing	Glycerol stock
pBNAN	Maxi	No	Medium	518.5	1037	500	1.94	2.34	Amp	No	No

Isolating DNA from bacteria: DNA Miniprep

- Harvest cells + aspirate media

- Resuspend them

Soln I Tris buffer
EDTA

- Lyse them + raise pH

Soln II

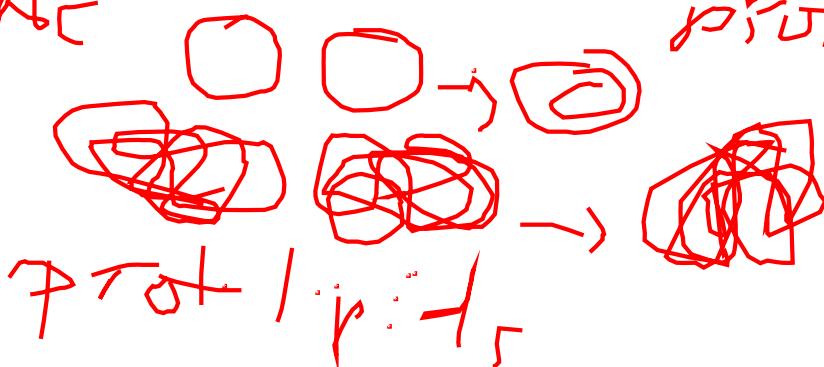

NaOH - denature DNA

- Restore pH

SDS - dissolve lipid

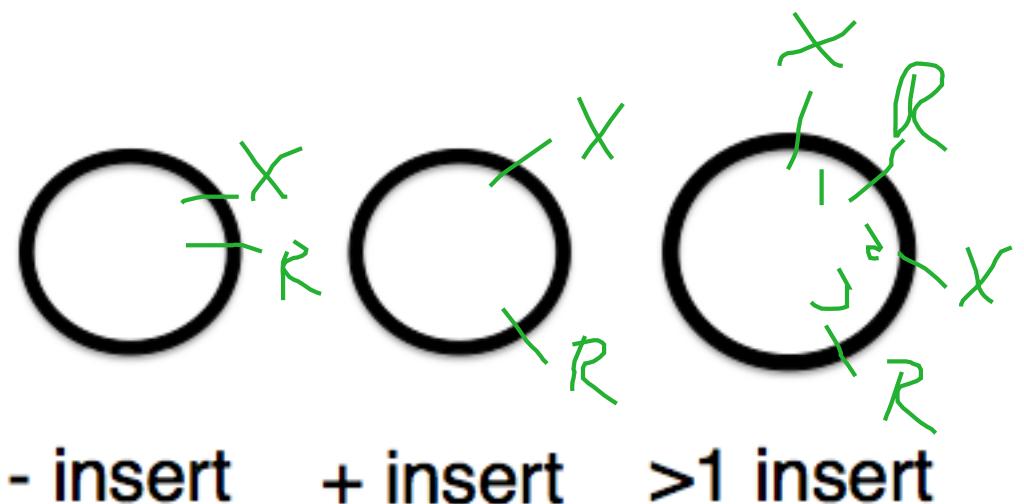

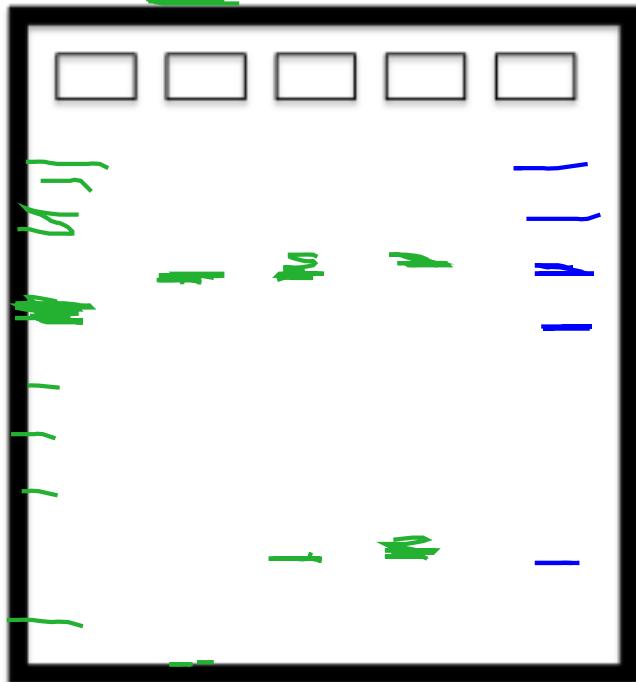

- Concentrate + wash

KAc

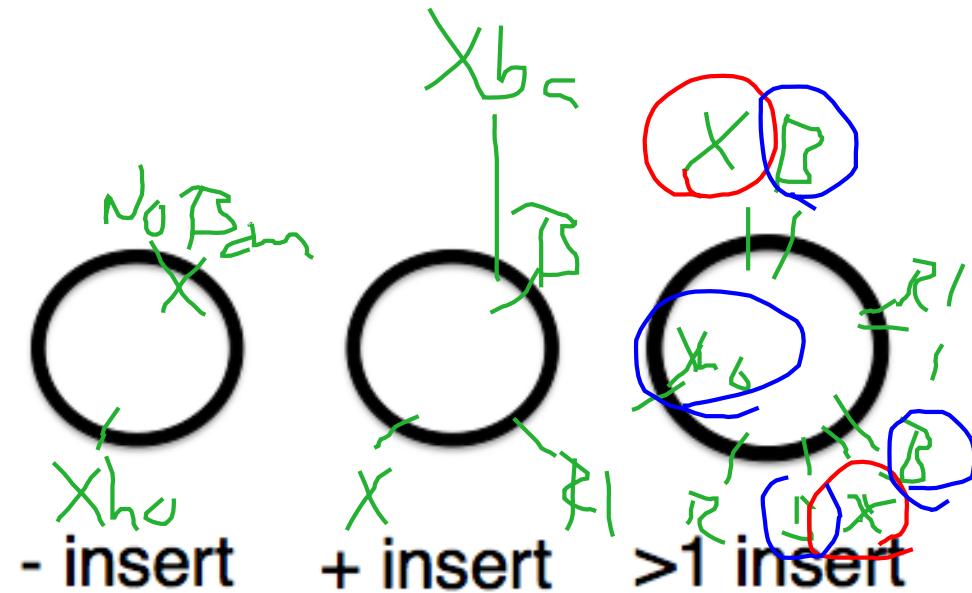

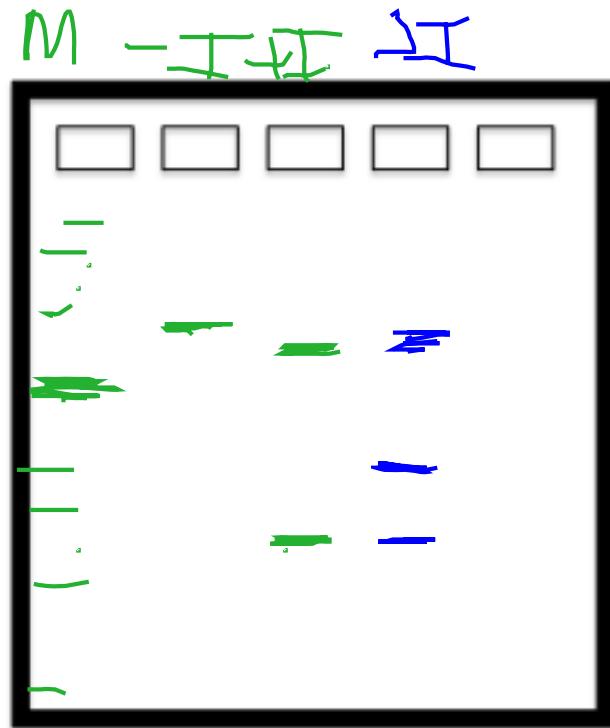

Diagnostic Digests: Xbal and RI?

$N - T + P = A \cdot Y$

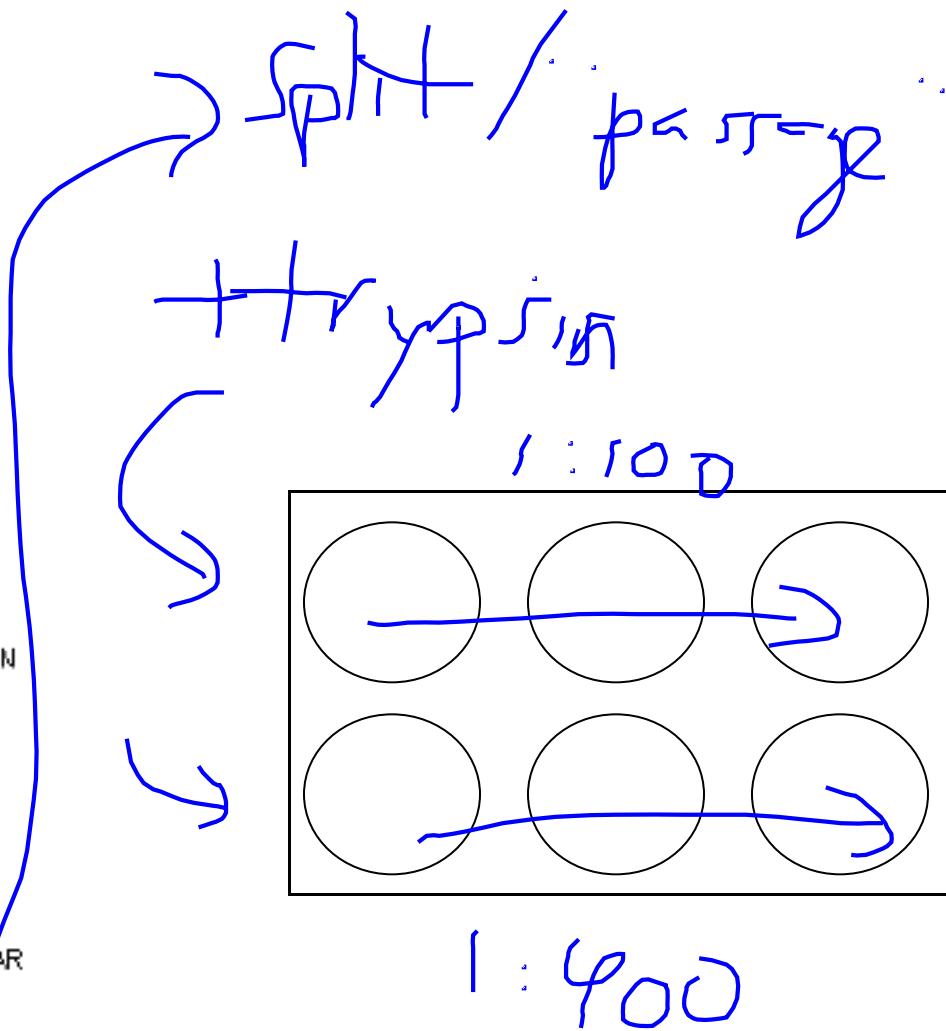

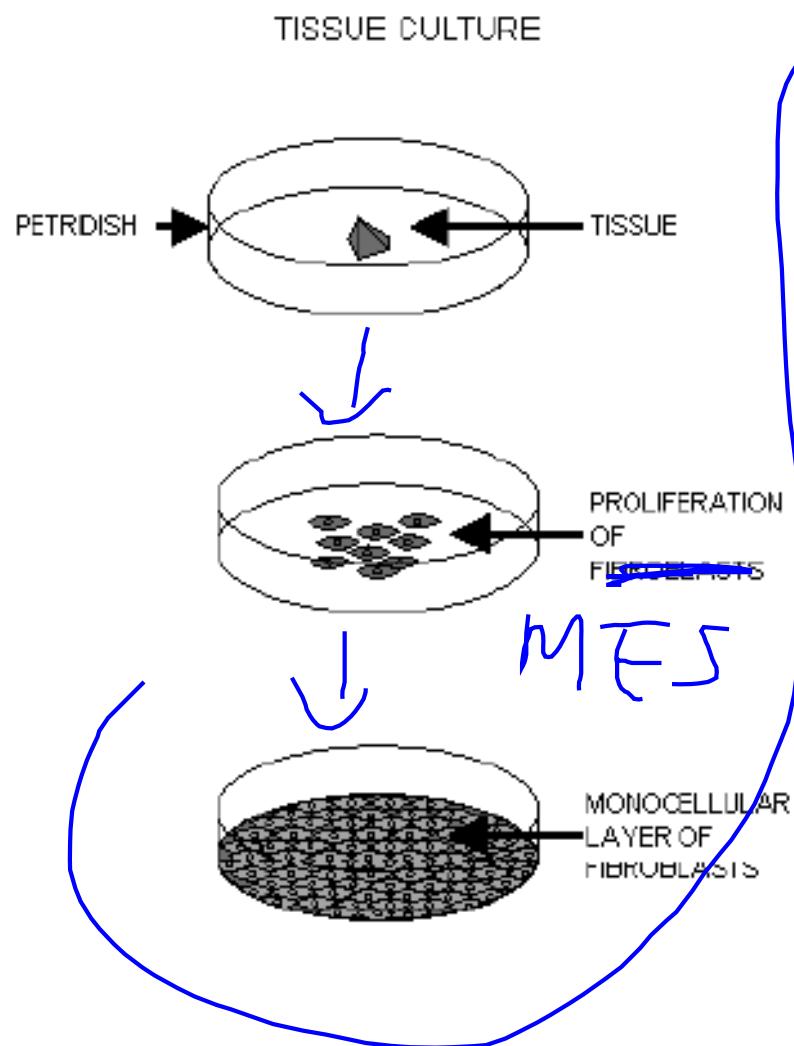

$P(X-NNX)$

Diagnostic Digests: BamHI and Xhol?

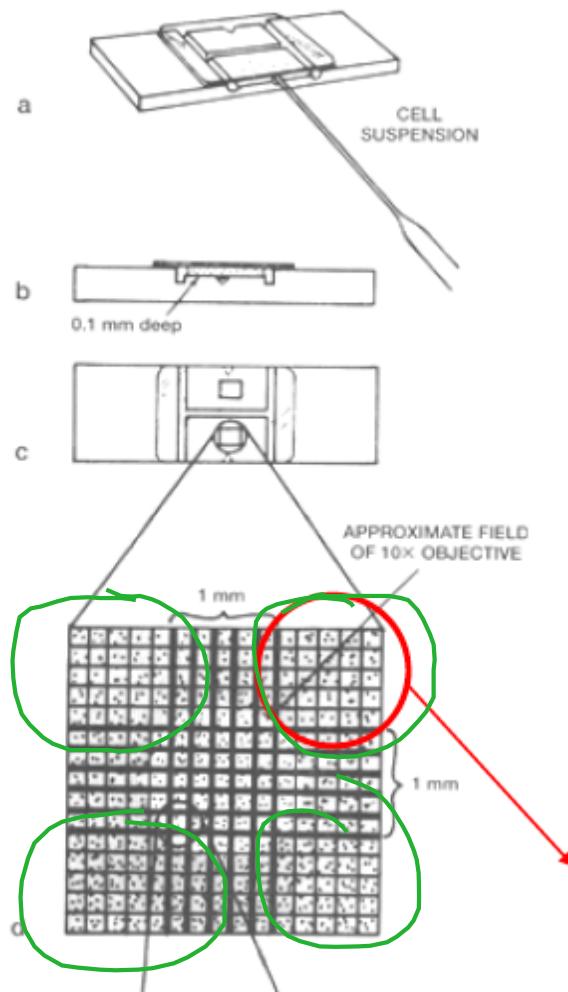

Also consider: compatible buffers, reaction temperatures, results if one enzyme doesn't cut

Also today: TC for fun....

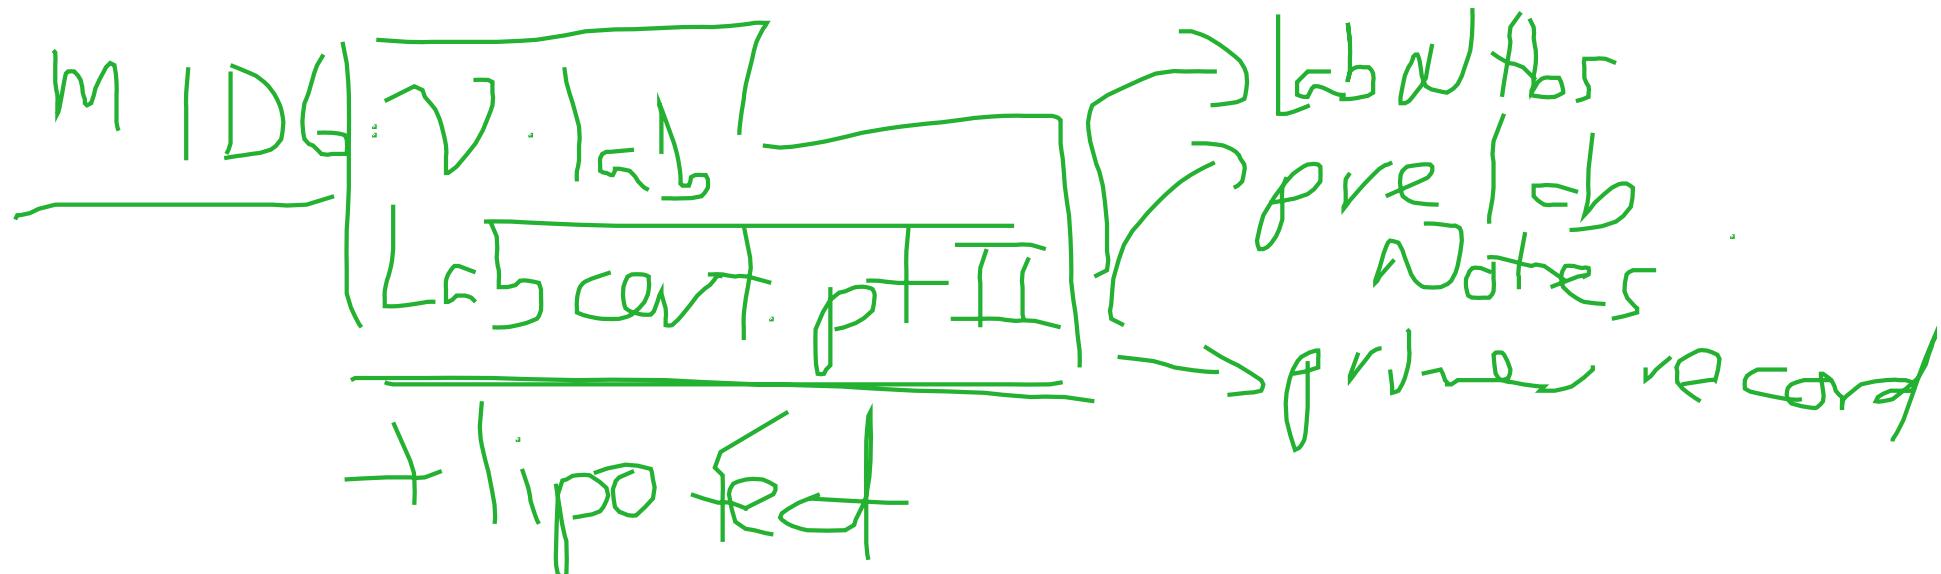

Figuring out how many cells you have

Count cells in
4 + 4 corners

Avg $\times 10,000$
cells/mm²

Mod 1: what's left?

MIDR : FAQS

/ 5 . / . / 2

A simple green line drawing of a rectangular frame. Inside the frame, there are two vertical lines and a diagonal line connecting them, forming a shape that looks like the letters 'I' and 'A'.
