

Leslie

Welcome to F15 20.109!

1. Introductions & 20.109 Mission
2. Intro to Wiki & Semester Overview
3. Daily Operations
4. Lab Safety
5. Lab Notebook
6. Lab Tour (...your first protocol!)

20.109 mission

- Aim 1: Novel investigations
- Aim 2: Authentic communication
- Aim 3: Integrity-based collaboration
 - Contributions to team assignments
 - Independent completion of individual assignments

Your new best friend: *the 20.109 wiki*

20.109(S16): Laboratory Fundamentals of Biological Engineering

[Home](#) [People](#) [Schedule Spring 2016](#) [Assignments](#) [Homework](#) [Lab Basics](#) [Wiki Basics](#)
[Protein Engineering](#) [System Engineering](#) [Biomaterials Engineering](#)

Welcome and details for Spring 2016 [\[edit\]](#)

Lecture: T/R 11-12 (16-220)

Lab: T/R 1-5 or W/F 1-5 (56-322)

People: Instructor and student web pages may be found at the linked [People](#) page.

Welcome to 20.109! For some of you this will be the first time in a research lab and for others it will not; either way, it is our goal to make this class a useful and fun introduction to experiments and techniques in biological engineering. There is not time enough to show you everything you'll need to know if you go on to do research, but after taking this class you should feel confident and familiar with some fundamental concepts, techniques, and lab protocols. You will develop good habits at the bench, ones that will increase the likelihood

Semester overview: schedule

MOD	DAY	DATE	LECTURER	LABORATORY EXPERIMENTS	ASSIGNMENTS
		T/W Feb 2/3	NLL ↗	Orientation	
1	1	R/F Feb 4/5	NLL ↗	In silico cloning	Lab orientation quiz Homework due
1	2	T/W Feb 9/10	NLL ↗	Design mutation primers	Homework due
1	3	R/F Feb 11/12	NLL ↗	Site-directed mutagenesis	Homework due
		T/W Feb 16/17		Presidents' day holiday	
1	4	R/F Feb 18/19	NLL ↗	Prepare expression system	Lab quiz Homework due
1	5	T/W Feb 23/24	NLL ↗	Induce protein expression	
1	6	R/F Feb 25/26	NLL ↗	Purify protein	Homework due
1	7	T/W Mar 1/2	NLL ↗	Characterize protein expression	Homework due
1	8	R/F Mar 3/4	NLL ↗	Assess protein function	Lab quiz Homework due
2	1	T/W Mar 8/9	LDS ↗	Introduction to cell strains and plating	Homework due
2	2	R/F Mar 10/11	LDS ↗	Western analysis and system conditions	Protein engineering summary draft due Sat, Mar 12 at 5 pm
2	3	T/W Mar 15/16	LDS ↗	Western analysis and system conditions 20.109(S16): Complete Western and prepare damaged DNA (Day3)	Homework due Protein engineering mini-presentation due Tue/Wed, Mar 16/17 at 10 pm
2	4	R/F Mar 17/18		Journal club I	Journal club I slides due Thu/Fri, Mar 17/18 at 1 pm

The secret to 20.109: Time Management

Assignments in 20.109

Major assignments (80%)

Module	Topic	Assignment	% of final grade	Links to description and/or evaluation
1		Protein engineering summary	15	Assignment description
		Protein engineering mini-presentation	5	Assignment description and evaluation rubric
2		Journal club presentation	10	Assignment description and article sign-up Evaluation rubric (PDF download)
		System engineering research article	25	Assignment description
3		Research proposal presentation	20	Assignment description Evaluation rubric (PDF download)
		Biomaterials engineering mini-report	5	Assignment description and evaluation rubric

Daily Work (20%)

- Notebook
- Quizzes
- *Homework*
- Participation
- Blog posts

Homework

- Only 7% of final grade(?!)
- Give it your best:
 - never gratuitous, building blocks toward big-point assignment
 - a lot of feedback will prove very helpful
 - great tool to keep ahead of the game and pace your work

Daily Operations:

- Hand in homework- receive graded homework
- Quizzes: 15 points, ~15minutes (2X per module)
- Pre-lab lecture & discussion

- The fun stuff = science! → evernote lab notebook

The key to daily 20.109: *The wiki is your friend*

Lab Notebooks: Evernote (evernote.com)

The screenshot displays the Evernote Premium web interface. The browser address bar shows 'LESLIEMM@MIT.EDU'. The page title is 'Evernote Premium'. The main content area is titled '20.109(S15)_Jennifer' and shows a calendar view of notes. The notes are organized by month: MAY 2015 (1 note), APRIL 2015 (4 notes), and MARCH 2015 (6 notes). The selected note, 'M3D2: Biotemplating on Phage Nanowires', is dated '5/8/15 April 17, 2015' and has a purpose of 'Purpose To biotemplate t...'. The note content includes a date 'April 17, 2015', a 'Purpose' section with the text 'To biotemplate the M13 phage with TiO2 and prepare a TEM grid.', and a 'Protocols' section. The protocols section includes a sub-section 'Part 1: React AuNP:phage with Ti(I-pro)4' with a warning: 'Today's lab has some safety hazards and you must work extremely carefully. Lab coats, gloves and goggles are a must when you're at the chemical hood. The reaction of the complexed phage with the titanium will take place in the hood at supercooled temperatures (a bath at ~ -40°C). Once the titanium has been deposited on the surface of the phage, the solution is less hazardous, though you should still treat the materials with care since no reactions run to completion.' Below the protocols section, there is a note for 'For all groups:' with the instruction 'Chill your complexed phage on ice on your bench until you are ready to' and a small image of a lab bench.

M3D2: Biotemplating on Phage Nanowires

April 17, 2015

Purpose

To biotemplate the M13 phage with TiO₂ and prepare a TEM grid.

Protocols

Today in lab you will react your Au:phage with titanium isopropoxide, harvest a small aliquot to visualize with TEM next time, and then wash the remainder of the nanowires several times – first with ethanol, and then with water. You will have time during these steps to work on the FNW, a first step toward developing a research proposal idea. Next time, you'll share your FNW findings with your partner.

Part 1: React AuNP:phage with Ti(I-pro)4

Today's lab has some safety hazards and you must work extremely carefully. Lab coats, gloves and goggles are a must when you're at the chemical hood. The reaction of the complexed phage with the titanium will take place in the hood at supercooled temperatures (a bath at ~ -40°C). Once the titanium has been deposited on the surface of the phage, the solution is less hazardous, though you should still treat the materials with care since no reactions run to completion.

For all groups:

Chill your complexed phage on ice on your bench until you are ready to

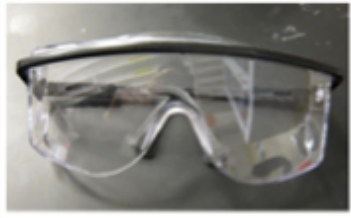

Evernote Lab Notebooks:

- Register for an Evernote account and create a 20.109 notebook.
- Please use your name in the title of your notebook
 - For example: 20.109(F15)_Leslie
- Read the wiki page called “Guidelines for maintaining your lab notebook” (under Assignments tab)

IMPT: Share your evernote lab notebooks with:

- me (lesliemm@mit.edu)
- Maxine (jonas_m@mit.edu)
- Jing Zhang (jgzhang@mit.edu)

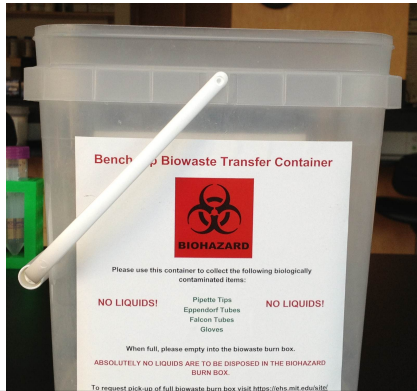

Personal Protective Equipment (PPE)

Item	Required	Recommended
Safety glasses 	<ul style="list-style-type: none">• At hood. <i>fume</i>• When using ethanol burners.• Add face shield at UV transilluminator.	<ul style="list-style-type: none">• Large quantities of liquid or powder (even if not strictly hazardous) due to chance of irritation by splash, dust, etc.
Lab coat 	<ul style="list-style-type: none">• At hood.• In TC room. <p><i>biomaterial</i></p>	<ul style="list-style-type: none">• See above.
Gloves 	<ul style="list-style-type: none">• Working with hazardous materials (w/r/t chem or bio).• Nitrile for greater hazards (e.g., EtBr).	<ul style="list-style-type: none">• Working with any material.• Touching gloves-on equipment.

almost always

Managing Biological Waste:

Benchttop waste:

Empty daily

pipette tips
kimwipes
gloves
tubes
plastic
pipettes

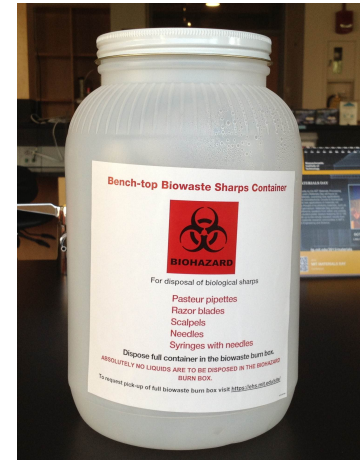

NO LIQUIDS!

Biowaste Box:

agar bacteria plates

Sharps container:

glass tubes
glass pasteur
pipettes

Today in the lab:

- Find your lab partner, pick your bench, check out your space, and sign up on the lab map up front!
- Complete lab orientation
- Check out the homework for M1D1 (due on Thursday, 2/4).
- Respond to the Office Hours doodle poll later today
