Effect of affinity on anti-PD-1 immune checkpoint blockade therapy

Spotlight on MIT COVID-19 work: Vaccine, Drug, and Testing Development

CDC/Science Photo Library

Immune Checkpoint Blockade Therapy

In the Wittrup lab, we use a variety of protein engineering strategies to understand and develop effective cancer biopharmaceuticals...

Dr. James P. Allison

Dr. Tasuku Honjo

2018 Nobel Prize in Physiology or Medicine for the discovery of cancer therapy by inhibition of negative immune regulation

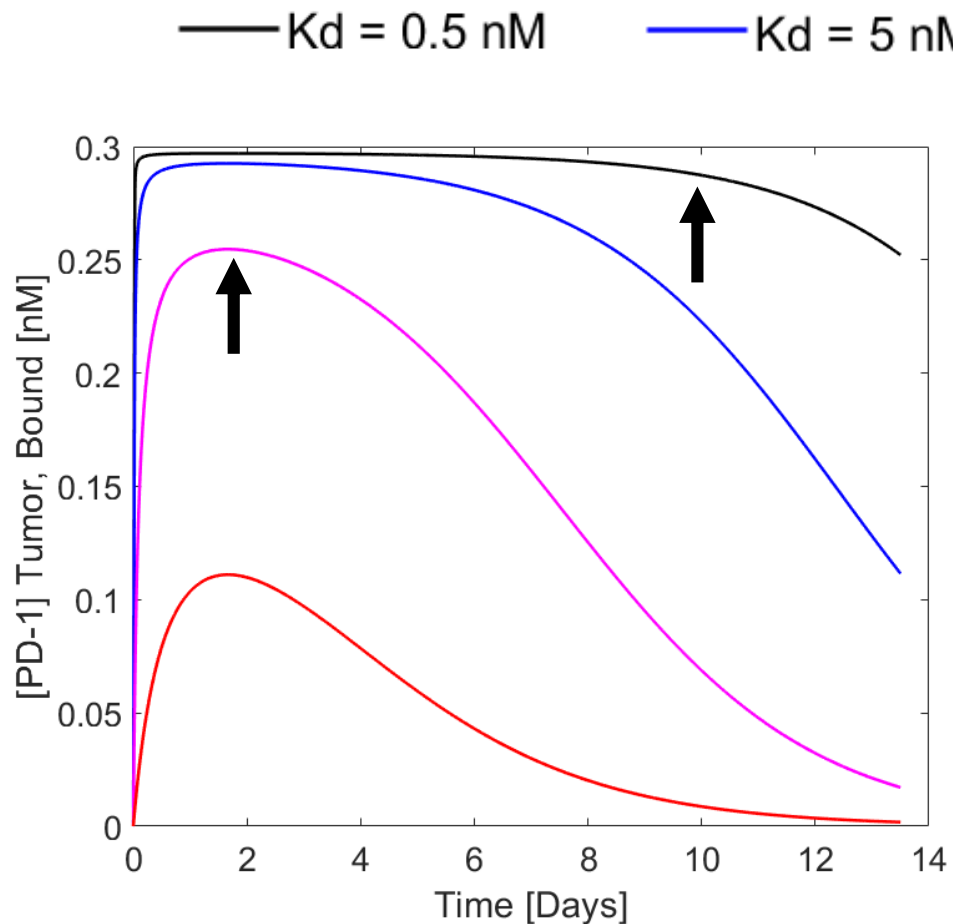

Moving to a PD-1 specific model

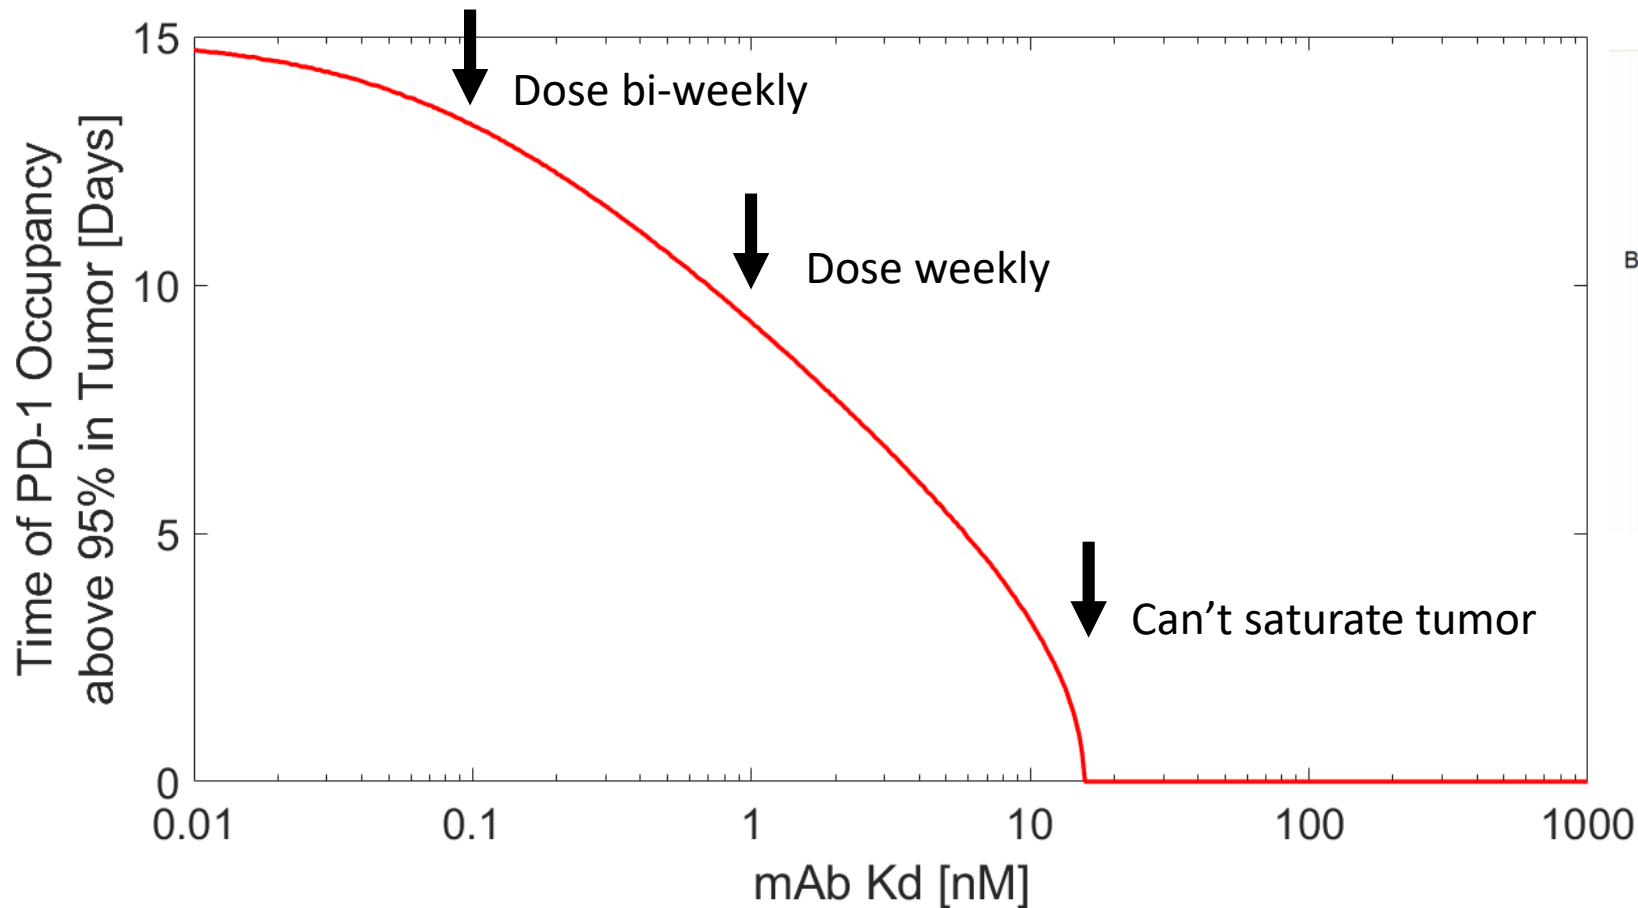

Modeling the concentration of drug in plasma

Modeling the receptor occupancy in the tumor

How long does drug stay bound to PD-1 in tumor?

Blinatumomab $t_{1/2} = \sim 2$ hours !
Requires continuous IV administration

Anti-PD-1 $t_{1/2} = \sim 35$ hours (mice)
Anti-PD-1 $t_{1/2} = \sim 27$ days (humans)

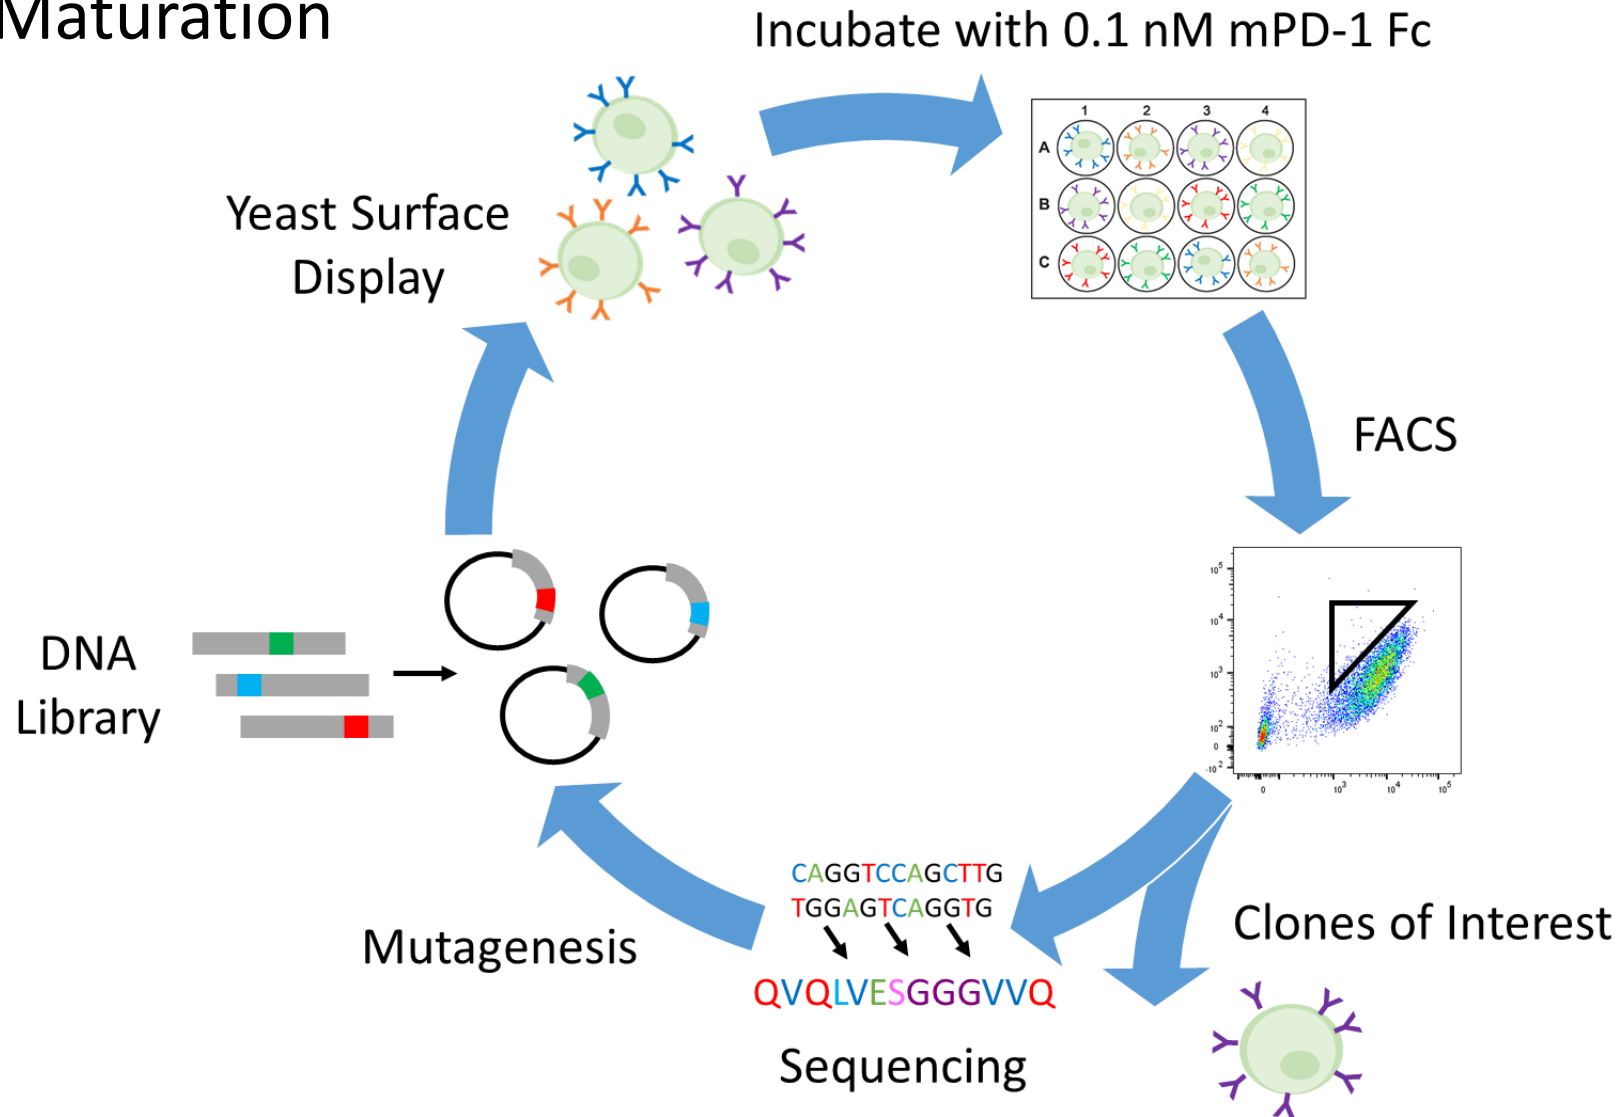

Can we replicate this in vivo?

We need to make a set of anti-PD-1 antibodies with varying affinities

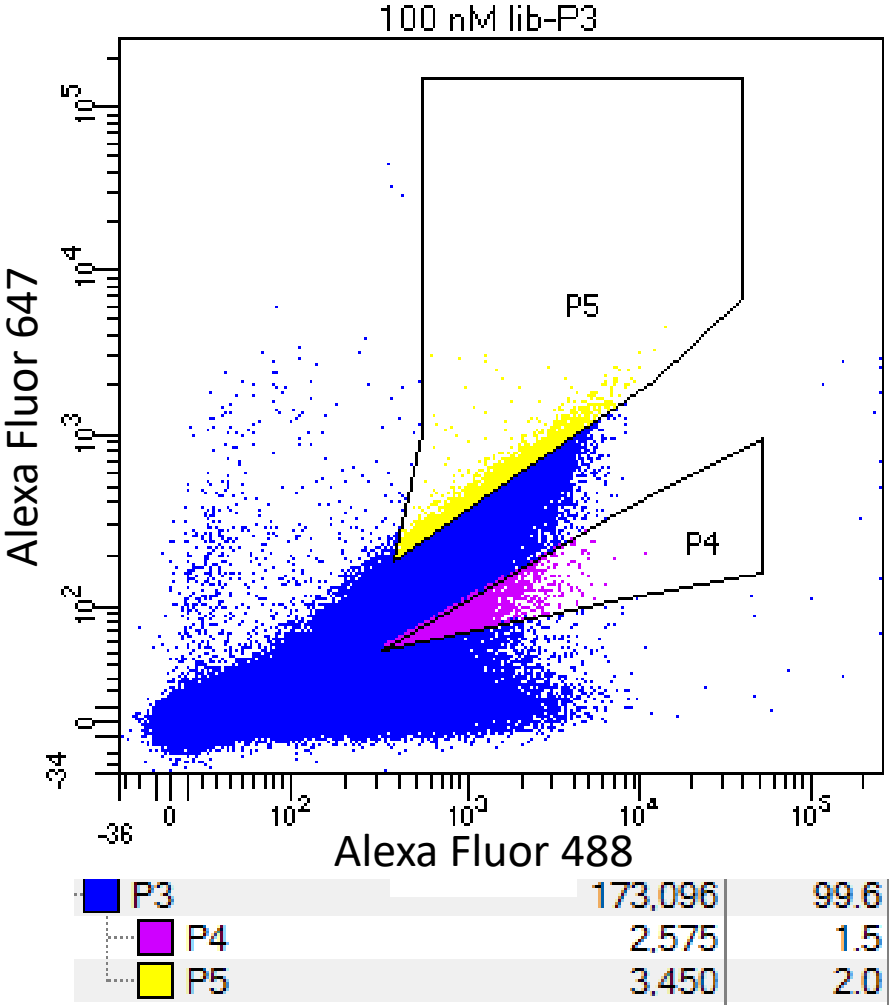

How do we change the binding affinity of anti-PD-1?

Affinity Maturation

In vivo validation

Next steps:

- Test panel of anti-PD-1 antibodies in vivo
- Using fully murine mouse antibodies, tumor lines
 - Interaction with mouse immune cells
- Translation to humans?

In collaboration with Yash Agarwal

Effect of affinity on anti-PD-1 immune checkpoint blockade therapy

Antibodies and COVID-19

There are three major ways to think about the role of antibodies in COVID-19:

1. Rapid COVID diagnostic test
 - **Sikes Lab**
2. Test for Retained Immunity to COVID-19 – [Do patients develop lasting B cell immunity?](#)
3. Antibody Treatment
 - Wittrup Lab → Adimab
 - [Synthetic](#) vs. [Native](#) Antibody Campaign
 - Other treatments: [Remdesivir](#), [tPA](#) ([Dr. Mike Yaffe](#)), [Pentelute Lab peptide](#), etc.
4. (Not related to antibodies) Vaccine Development
 - **Love Lab**
5. (Not related to antibodies) RNA Seq Data Set of both diseased and healthy cells expressing ACE2 (the gene encoding the host receptor) and TMPRSS2 (the gene involved in processing the viral spike protein)
 - <http://shaleklab.com/covid-19-scrna-seq-resource-datasets-released/>

Rapid development of paper-based COVID-19 Immunoassay
Hadley Sikes Lab
Eric Miller, Ki-Joo Sung, et al.

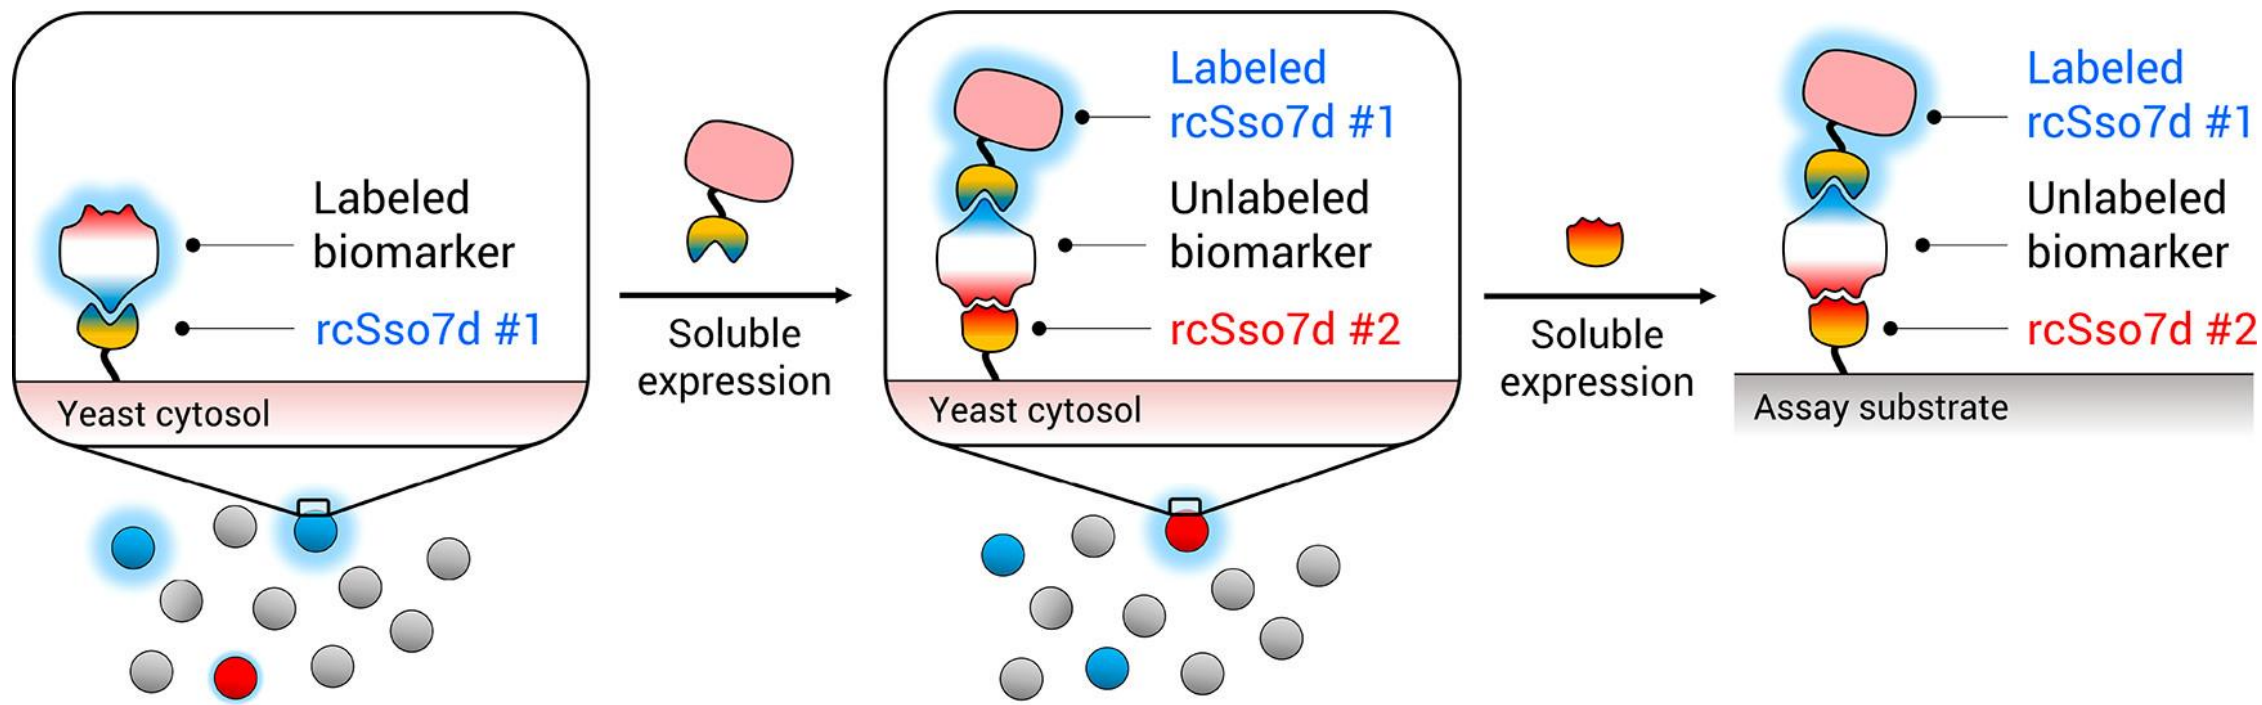

Rapid Development of paper-based COVID-19 Immunoassay

Sso7d vs. Antibody

- 9 amino acid binding pocket
- Thermally stable
- Size
